How to filter attribute values using IQL

To filter attribute values using IQL, you need to be logged in with an Insight Administrator role or an Insight Schema Manager role:

1. Click Insight in the left sidebar.
2. Under Insight, click Object Schemas and select an object schema.
3. Select an object type at left.
4. At right, click Attributes.
5. Click ⚙ to the right of the attribute you wish to modify and select Configure.
6. Under the Filter objects tab, enter an IQL filter.
