How to change the name or description of an object schema

Changing the name or description of an object schema changes the name or description that is displayed. The key cannot be changed. To complete this task, you must be logged in an Insight Administrator or Insight Schema Manager role:

1. If you are in the Insight > Object Schemas view:
   a. Click the cogwheel next to the schema you want to configure.
   b. In the dropdown, select Configure.
   c. Under the General tab, click on either Name or Description to edit the name or configuration of the object schema.

2. If you are within an object schema:
   a. Click Object Schema at top-right and select Configure.
   b. Under the General tab, click on either Name or Description to edit the name or configuration of the object schema.
