

# Inspect configuration

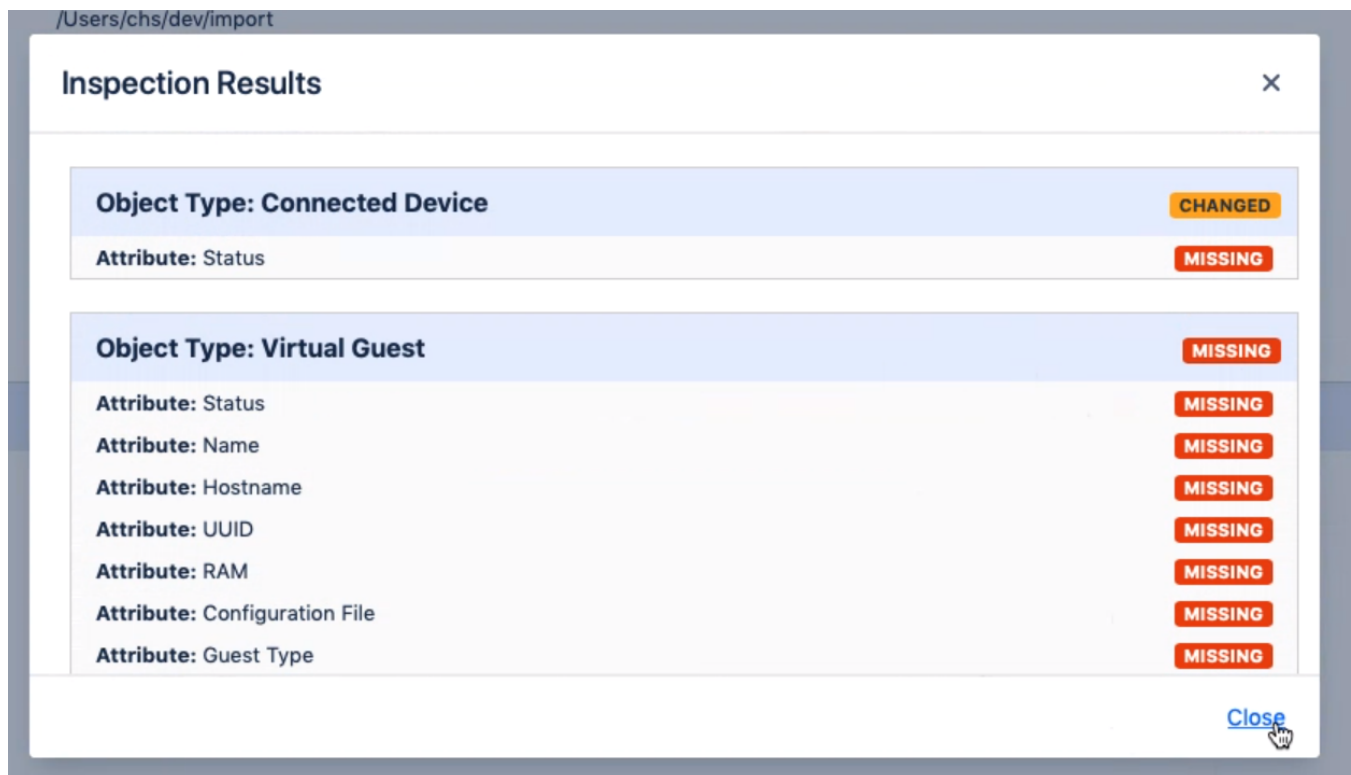

The **Inspect Configuration** tool allows you to view any elements of your **Import configuration** that have been changed or are missing from the expected configuration.

To use the **Inspect Configuration** tool:

1. Select your object schema.
2. At top-right, click **Configure** in the drop-down.
3. Select the **Import** tab.
4. Select the **Import Configuration** you want to inspect and click the **Configure** drop-down.
5. Select **Inspect Configuration** from the drop-down.

The **Inspection Results** dialog will display any changed or missing elements of your **Import configuration**.

If there are no changed or missing elements, you will get the cheery message below.

## Inspection Results

**No differences found, everything is fine.**
